

Acaena novae-zelandiae

Bidgee Widgee

Height:	Prostrate
Width:	1m - 2m
Habit:	A sprawling mat-like plant.
Foliage:	Bright to dark green oblong leaves to 4cm long.
Flowers:	Flowers in greenish-white balls on stalks to about 20cm long, from October to January, which then develop into reddish fruits covered in spines.
Requirements:	Adaptable, tolerating wet and dry conditions. Shade, full or partial sun.
Cultivation & uses:	A useful soil-binding and ground cover plant for erosion control. The spiny seed burrs easily attach to clothing when brushed against it.

Local Distribution:

Map is indicative to the natural distribution of the species based on the best available knowledge.

The natural occurrence of this species is high.
